Drug Facts

COMPOSITION : Each ml contain Norethisterone 50 mg + Estradiol 5 mg Inj	PHARMACOLOGICAL CLASS : progestin.
---	--

NAME : Norethisterone Enanthate 50 mg + Estradiol Valerate 5 mg Injection

AVAILABLE AS : FEMYVLESS

PHARMACOLOGICAL ACTION :

Through its progestogenic activity, NETE has potent antigonadotropic effects and can inhibit fertility and suppress sex hormone levels. A single intramuscular injection of Estradiol Valerate and Norethisterone Enanthate has been found to strongly suppress testosterone levels

USED FOR :

FEMYVLESS Norethisterone enanthate 50 mg combined with estradiol valerate 5 mg is used as a combined injectable contraceptive to prevent pregnancy in women. It is given by intramuscular injection once a month. Norethisterone enanthate (NET-EN) 50 mg combined with estradiol valerate (EV) 5 mg was studied as a once-a-month injectable contraceptive with regard to effectiveness, cycle control, adverse events and acceptability

SIDE EFFECTS : The following is a list of possible side-effects that may occur from all constituting ingredients of FEMYVLESS Injection. This is not a comprehensive list. These side-effects are possible, but do not always occur. Some of the side-effects may be rare but serious.
